SOURCE-ONLY REVIEW PACK · PROTOCOL 1

Review the evidence first.

MedDelta temporal dataset v1 · 32 fictional packets · 29 October 2026

Pharmacist review is pending.

These developer-authored examples are software research material, not patient records or treatment guidance. All medicine names are fictional. Judge what the documents support, not whether treatment is suitable.

How to review

1. Read the rubric below. Start with the eight practice packets to clarify definitions.
2. For each evaluation packet, choose one label, cite source lines or document dates, and explain your reasoning and uncertainty.
3. Complete evaluation judgments before viewing MedDelta predictions, developer reference labels, or prior reviews.
4. Export your review JSON from the lab. You can reopen it to resume. Browser work disappears on reload.
5. After completing the evaluation set, compare predictions and record disagreements. Changes made after exposure must remain distinguishable from the initial judgments.

Document dates order evidence. A later explicit change does not automatically resolve an earlier unexplained discrepancy. Missing mention never implies a stop. An explicit stop is a documentary finding, not a treatment recommendation. Line 0 refers to the document date.

Names, reviewer roles, and timestamps are self-entered or browser-generated. This workflow does not authenticate clinicians or prevent prior exposure outside the app.

Label rubric

Label	Meaning
Matching instructions	Written amounts (including equivalent SI units), route, and frequency agree where mentioned.
Documented change	An explicit change or restart explains the transition, without an earlier unresolved discrepancy.
Unexplained discrepancy	Instructions disagree without an adequate explanation, or disagree on the same date with unknown order.
Missing from latest record	The medicine is omitted from a latest record without an applicable explicit stop. Omission is not discontinuation.
Explicit stop documented	The latest target-specific instruction is an explicit stop, with no later restart or unresolved discrepancy.
First documented	First mention in the supplied records; actual treatment start date is unknown.

Label	Meaning
Insufficient evidence	Dates, missing fields, or ambiguous/conditional instructions prevent a supported judgment. Clear wording is not unresolved just because software cannot parse it.

Source packets

No predictions or proposed labels are included below. Cite the records and lines used for each judgment.

D01 · Alphamed · development

Record 1 (r1)
